

Delf Product Care Instructions:

Always fit product after painting works have been completed.

Restoration Range:

Brass and plated brass products, such as our Bright Chrome, Satin Chrome and Matt Black finishes can be maintained by using Mr. Sheen or other similar wax-based product applied with a soft cloth.

Trade Range:

Zinc and steel based plated products such as our Bright Chrome, Satin Chrome, Satin Nickel & Matt Black finishes can be maintained by using Mr. Sheen or other similar wax-based product applied with a soft cloth.

External products can be affected by harsh environments, and blemishes can appear on the surface of the product. To help prevent this occurring, Delf suggests washing the product regularly with warm water and a soft cloth and dried thoroughly to help prevent corrosion.

Stainless Steel Products:

Stainless Steel can be affected by harsh environments, and blemishes can appear on the surface of the product. To help prevent this occurring, Delf suggests washing the product regularly with warm water and a soft cloth and dried thoroughly to help prevent corrosion.

Blemishes on satin stainless steel may be removed by rubbing with a suitable stainless cleaner/polish such as Eagle One Never Dull wadding polish.

To keep the product looking like new, be sure to rub in the same direction as to the grain itself.

Avoid using caustic products, acids, soaps, abrasive cleaners and solvents on any Delf product as these can cause discolouration and corrosion.
